

# **Addendum B**

**4/6/2017**

## **1. Addendum B**

This Addendum is for the Geotechnical Engineering Services sent out on 4/5/2017. The purpose of this Addendum B is to provide additional information for Geotechnical borings requested for the site.

1. The boring location plan accompanying the RFP illustrates recommended boring locations as developed by the Structural Engineer. The final number of borings and their locations shall be at the discretion of the Geotechnical Engineer, as required in his/her opinion to form the basis for the recommendations contained in the Geotechnical Report. However, a minimum of six (6) test borings is required.
2. The 50' boring depth noted on the Recommended Boring Location Plan shall be modified as follows: 2 borings to 50' depth or refusal, remaining borings to 30 feet or refusal. In the event Shear Wave Velocity testing is conducted, all of the borings can be to a depth of 30 feet or refusal.
